**OMTP**  
www.omtp.org

OMTP is a global organisation for the mobile telecommunications industry that drives mobile terminal requirements. Their members include the likes of : AT&T, Deutsche Telekom AG, Orange, Smart Communications, Telecom Italia, Telefónica and Vodafone, Ericsson and Nokia.

We were contacted to initially look at the overall online branding for OMTP and worked closely with their management team through a series of design stages to create a new look and feel for the site which also fully met their functional requirements.

Our technical team then developed a solution around this new design using a custom Microsoft ASP.net 3.5 programming code and SQL Server 2008 and utilising Microsoft's Office SharePoint Server 2007 for distributed content management. This approach allowed a great deal of flexibility both in terms of design and system features such as the ability for us to create a custom system for handling OMTP's new affiliate level membership scheme including online payment and profile management.
